HOW DOES IT WORKS

THE TECHNOLOGY

The Ceam Heritage Team division was born from the partnership between CEAM Control Equipment technology, which has been operating with increasing success in the design and production of professional industrial sensors since the 1960s, and Professor Fioravanti of the University of Florence, internationally recognized specialists in the field of conservation and restoration techniques for degradable antique wood and artifacts. To be restored, these preserved and displayed, these materials require special attention and technology.

In a market where not only the technological level of aid systems was very low, but the proposed solutions were commercial assemblages put together by various catalog vendors from different backgrounds, with little chance of solving the problems definitively, never had a qualified manufacturer like CEAM appeared on the market, taking advantage of the conspicuous investments in its usual areas.

CEAM has easily managed to make a technological investment by bringing these new and advanced technologies to an industry where investment has been stagnant forever.

So together we manage to give highly professional integrated answers that are actually designed for the problems of the industry.

Technologies that become very effective but also easy-to-use solutions that have never been seen before in the field of cultural heritage.

In addition, the professional staff of the Heritage Team completes the work, always providing timely and highly professional support, thanks to the deep knowledge of the subject matter and also thanks to collaborations at the top of the research and restoration fields.

NOT JUST PRODUCTS

Bat SOLUTIONS

Each of our services, each of our accessories represents a small or large, but concrete contribution to solving the needs of our clients. If requested, we do not just provide the product; we can go much further, to the point of offering a complete service, from consulting to providing the necessary products and services.

Our staff of competent specialists can analyze the various needs and then indicate the shortest path to a solution quickly, also offering various possible alternative perspectives.

And being real manufacturers, in addition to being able to offer a wide range of standard series products, we are also set to meet special requests by making custom products even in limited runs for prototypes or spare parts, with the possibility of shipping them even 24/48 hours after the order with a small additional cost, thanks to our FDS (Fast Delivery Service).

COMPANY PROFILE

Who We Are

CEAM is a company with a long and successful history that began in 1967 with the production of temperature sensors. It has since evolved into many other areas of technology, producing a growing range of electronic instruments integrated with innovative software solutions, such as the very powerful industrial IOT-Cloud software platform CWS-CWIZION, now our flagship product: an industry 10 years ahead of the market. After more than 50 years, today CEAM Group is a steadily growing reality, with an innovative model of entrepreneurial networking, uniting and coordinating subsidiaries and strategic partners operating in total synergy.

Our Mission

Over the years, we moved from producing individual products to making every bit an ingredient for comprehensive solutions that guarantee concrete results.

This is why no product in the group is an end in itself, but even if it has a specific function it is still designed to contribute to a global project. We do all this by striving for excellence, without any compromise.

Sustainable Development

I can't hurt you without hurting myself, we are inextricably linked. (M. Ghandi)

There is a growing awareness that no future worth living is possible without thinking about a new real and humane relationship between production and the rest of the world. We have always known this which is why we are committed to putting our ideas into practice with concrete actions, such as diversamentebusiness.it a solution that networks, with great success, disability and the world of production, creating not only wealth, but above all dignity.

Quality

Perhaps this is one of the most overused words today, especially in the corporate world, so we believe that we should not talk about quality but show it every day, so we will not spend a word on it.

Let's just say that to certify this status we have a leading third-party organization that constantly ensures things are always carried out to the best of our ability, and we pay them not to get discounts, but to unearth errors and critical issues, to allow us to improve.
